

MUBASHIR HASNAIN

Full-Stack Software Engineer | Mobile & Web Application Development

+92 331 2025765 | mubashera38@gmail.com | Karachi, Pakistan

PROFESSIONAL SUMMARY

Full-stack software engineer with 6+ years of experience shipping production applications end-to-end across both **mobile (Flutter, React Native, Swift, Kotlin)** and **web (Next.js, React.js, Node.js)**, with hands-on ownership spanning REST/GraphQL API design, SQL/NoSQL database architecture (MySQL, PostgreSQL, MongoDB), CI/CD pipelines, and cloud deployment on AWS, Azure, and GCP. Owns products architecture-through-release, with **250,000+ combined downloads across 20+ production applications**. Led the architecture and delivery of a full-stack sales & supervisor monitoring portal (Node.js/Next.js + MySQL) at Mezan Group, and has a track record of quickly ramping on new backend platforms on the job (most recently Oracle APEX for enterprise workflows). Strong foundation in clean architecture, design patterns, code review, mentoring, and test automation (unit, integration, Playwright, Appium). Comfortable moving fluidly across the stack and drawn to products, like academic planning software, where good engineering directly improves how people make important decisions.

RELEVANT FULL-STACK & WEB EXPERIENCE

Next.js • React.js • Node.js • JavaScript (ES6+) • REST APIs • GraphQL • JWT / OAuth • MySQL • PostgreSQL • MongoDB • SQLite • Firebase Firestore • AWS • Azure • GCP • Git/GitHub/GitLab • CI/CD (GitLab CI, Azure DevOps, App Center) • Unit / Integration / Widget Testing • Playwright • Appium • Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer | Mezan Group

Aug 2025 – Present

- Architected and delivered the **BA Program**, a full-stack sales & supervisor monitoring portal built with a **Node.js/Next.js** frontend-and-backend stack on top of **MySQL**, owned end-to-end from data modeling through production deployment.
- Designed and integrated REST APIs across multiple mobile and web applications (Distributor Order Management, Cow Management System, QR-based Loyalty App), connecting Flutter clients, backend services, and third-party systems with real-time data sync.
- Set up and managed **CI/CD pipelines** using GitLab CI and AWS, automating build, test, and deployment workflows for production releases.
- Wrote clean, maintainable, and secure code following industry best practices, implementing data-protection measures across all applications, and produced technical documentation and release notes to support deployment and maintenance.
- Participated in code reviews and Agile/Scrum sprints across cross-functional teams of business analysts, UI/UX designers, and backend developers.
- Ramped up on **Oracle APEX** to build low-code web applications and internal business tools on top of Oracle Database, demonstrating the ability to quickly become productive in an unfamiliar backend stack.

Software Engineer | Pearl Engineers Planners & Project Managers

Feb 2025 – Jul 2025

- Led a cross-functional team of SEO specialists and web developers across mobile and web projects for service-based businesses.
- Developed modular, reusable components and implemented scalable state management (GetX, BLoC), cutting new-feature development time by **30%**.
- Owned unit testing, UI testing, and debugging to ensure optimal performance and stability prior to release.
- Delivered **PEPP**, a construction-focused platform for the UK market covering multiple modules (Home, Service Categories, Contact Us, Client Reviews, Quotation), published to the App Store.

Flutter Developer | 7CTECH

Dec 2020 – Jan 2025

- Applied clean architecture, MVVM, and GoF design patterns across production applications, building reusable component libraries that cut new-feature development time by **30%**.
- Optimized application performance end-to-end, achieving a **25% increase in speed** and an **80% decrease in crash rate** through systematic profiling and code optimization.
- Built automated test suites using Flutter's testing framework and Appium for cross-platform UI validation, ensuring regression coverage across production apps.
- Delivered **FashionPass** (130,000+ App Store downloads) integrating Stripe payments, Face ID/Touch ID biometric auth, and FCM push notifications — production experience in a payment-integrated, security-sensitive environment.
- Led an Ionic-to-Flutter migration, delivering full feature parity and performance improvements while reducing legacy technical debt.

Flutter Developer (Internship) | SUPERTECH

Mar 2020 – Jul 2020

- Built UIs from provided designs and integrated RESTful APIs using the http and Dio packages.
- Refactored critical modules, improving memory usage and performance by **20%**.

SELECTED PROJECTS

- ▶ **FashionPass** — iOS fashion e-commerce app built in Flutter; integrated Firebase Cloud Messaging (FCM) push notifications and Face ID/Touch ID authentication. 150,000+ App Store downloads.
- ▶ **FashionPass (Rebuild)** — Rebuilt the app using MVC architecture and BLoC state management for improved maintainability and testability.
- ▶ **iTAB** — Health app helping users manage daily vitamin/supplement intake with tailored recommendations and reminders. Published on Google Play.
- ▶ **Multi-Level Approval App** — Role- and designation-based approval workflow app for internal policy sign-off; Flutter frontend on an **Oracle ORDS** backend.
- ▶ **Tiretest.ai** — AI-integrated tire inspection app: analyzes a photo of a tire to assess health/damage, generates a report, and locates nearby tire shops via Google Maps with featured-shop placement.
- ▶ **Mian Shop & Mian Shop Delivery** — Grocery e-commerce platform with account management, favorites, purchase history, and real-time order tracking from processing through delivery.
- ▶ **Liefermars** — Food delivery app for browsing restaurants by cuisine and placing orders. Published on Google Play.
- ▶ **KGS** — Marketplace app connecting users with skilled home-service workers (electricians, plumbers, carpenters, and other maintenance professionals).
- ▶ **CREED** — Google Maps-based directory promoting Muslim-owned businesses across the USA through paid, plan-based listing placements.
- ▶ **NGO Finder** — Google Maps app with custom markers helping users locate nearby NGOs and the services they offer.
- ▶ **Ask Hidayah** — App for Hidayah Academy connecting users with Islamic scholars (alims) for guidance on religious matters.
- ▶ **Hanging App** — Smartwatch app for warehouse staff to inspect rental clothing as part of a streamlined inspection workflow.
- ▶ **Alteration App** — Warehouse alterations-management app to update statuses, mark tasks complete, and track pending/in-progress/completed work.
- ▶ **Pressing App** — Warehouse clothes-pressing operations app to streamline task management and improve efficiency.
- ▶ **\$100 Intern** — Recruiting app for sourcing interns and building candidate profiles.

TECHNICAL SKILLS

- ▶ **Languages:** JavaScript, Dart, Swift, Kotlin, Java, SQL
- ▶ **Web / Full-Stack:** Next.js, React.js, Node.js, HTML5, CSS3, JSON, XML, REST APIs, GraphQL, JWT/OAuth, PHP (Laravel)
- ▶ **Databases:** MySQL, PostgreSQL, MongoDB, SQLite, Firebase Firestore, Microsoft SQL Server
- ▶ **Cloud & DevOps:** AWS, Microsoft Azure, Google Cloud Platform (GCP), CI/CD, Kubernetes, Linux, Git/GitHub/GitLab/Bitbucket, GitLab CI, Azure DevOps, App Center, CodeMagic
- ▶ **Testing:** Unit, Widget & Integration Testing, Appium, Playwright, SQA, Debugging, Crash Reporting
- ▶ **Mobile:** Flutter, React Native, Swift, Kotlin, Java, Platform Channels, BLoC, GetX, Provider, Riverpod
- ▶ **Architecture:** MVC, MVVM, Clean Architecture, Repository Pattern, GoF Design Patterns
- ▶ **AI-Assisted Dev:** Claude Code, GitHub Copilot, Cursor, OpenAI API integration
- ▶ **Tools:** JIRA, Confluence, Figma, Postman, Visual Studio Code, Android Studio, Xcode

EDUCATION

BS Computer Science — Sir Syed University of Engineering & Technology, Karachi

KEY ACHIEVEMENTS

- ▶ Delivered **20+ production-grade** Flutter and full-stack applications across banking, fintech, e-commerce, logistics, and enterprise sectors, reaching **250,000+ combined downloads** — translating business requirements into production-ready solutions and leading development end-to-end.
- ▶ Reduced crash rates by up to **90% (best case)**, including an **80%** reduction and **25%** speed improvement on FashionPass at 7CTECH, through systematic performance profiling; maintained near-zero downtime in production via CI/CD automation.
- ▶ Cut new-feature development time by 30% by designing and enforcing a reusable, modular component library adopted across all team projects.
- ▶ Mentored junior engineers through code review, pair programming, and establishing team coding standards.
